APPLICATION PURSUANT TO 37 C.F.R. §1.84(B)(2)**

Dear Sir:

This is a request under the provisions of 37 CFR 1.84(B)(2) to include color photograph(s) in the above-referenced utility patent application. Applicants herewith include three (3) sets of the color photographs (Figures 6A, 6B, 7A, 7B; 11A, 11B, 11C; 15 A, 15B; 18A, 18B; 21A, 21B, 21C, 21D; 25A, 25B, 25C, 25D; 26A, 26B, 26C, 26D; and 29).

Applicants have included the following language as the first paragraph in that portion of the specification relating to the brief description of the drawings:

The file of this patent contains at least one drawing executed in color. Copies of this patent with color drawing(s) will be provided by the Patent and Trademark Office upon request and payment of the necessary fee.

- 1) For Figures 11B, 11C, 21A, 21B, 21C and 21D, the use of color is advantageous in determining the degree of cotyledon expansion, since the edges of the cotyledons are best identified by contrasting their green color against the background.
- 2) In Figures 11A, 11B, 11C, 18B, 21A, 21B, 25C and 25D, the effects of abiotic stress assays on overexpressing and wild-type plants may be discerned by the greener appearance of the overexpressing plants, best viewed by comparing the amount of green pigment in experimental and control plants.
- 3) In Figure 18A, the effects of a heat stress assay on overexpressing and wild-type plants may be discerned by the paler appearance of the overexpressing plants, best viewed by comparing the amount of green pigment in experimental and control plants.
- 4) In Figures 25A and 25B, the use of color is necessary to compare the amount of the pigment anthocyanin that is produced by overexpressors (Figure 25A) and wild-type (Figure 25B) seedlings.
- 5) In Figures 7A and 7B, 15A and 15B, 26A, 26B, 26C and 26D, the effects of water deprivation are best contrasted by comparing the differences in the degree of wilting and color between control and transgenic plants that appear in these photographs. Control plants are wilted and pale or gray-green in color, whereas transgenic plants are less wilted and have a medium green color. This color difference is much more pronounced in the photographs (Figs. 26C and 26D) showing the differences after rewatering. Control plants are dead, as indicated by the degree of desiccation and, in particular, their brown color, whereas the transgenic plants recovered, as indicated by their turgor and, in particular, their vivid green color.
- 6) In Figures 6A, 6B, and 29, the size of the overexpressing and control plants and extent of root mass is best determined by contrasting the edges of the green leaves and pale roots against the pale green/blue background, the edges being less readily discernible in a monochrome photograph.

The Commissioner is hereby authorized to charge Mendel Biotechnology, Inc. Deposit Account No. 50-1025 the amount of \$130.00, the fee for such a petition as set forth under 37 C.F.R. §1.17(i), or charge the correct fee to said Deposit Account, as the Commissioner deems appropriate.

Respectfully submitted,
